

TEMPORARY ITEM: 100-7029 – EXTENSION PLATE DUAL

With this extension plate [A] it's possible to use Flatfix Fusion for installation with bigger PV modules in terms of module width. In case of dual configuration, or better known as east-west configuration, it was not possible to do so. East orientated module was in interference with the West orientated module.

To solve this for long term, a mould is in modification to replace the low rib. The extension plate is now added to our portfolio to solve this issue for projects in the coming months (temporary solution).

A quick manual is available. Installers have to remove the low rib structure [C] of the low base element to make it possible to add the extensionplate [A]. Because of the extra thickness, an extra grounding ring [B] needs to be placed to ensure a good functioning.

Maximum possible width PV Module	without extension plate	1000mm
Maximum possible width PV Module	with extension plate	1016mm

- Item A 100-7029 Extension plate (TEMPORARY)
- Item B 100-7501 Grounding ring
- Item C 100-7020 Base element low
